PayFreight

Pitch Deck & Investment Case

1. Executive Summary & Problem

- **The Logistics Pain Point:** The European road freight transport market suffers from chronic liquidity bottlenecks. Freight carriers and truckers often wait 60 to 90 days for payment settlement after completing shipments. Paper-based proof of delivery (e-CMR) introduces administrative delays, disputes, high factoring fees, and severe cash flow stress.
- **The Solution:** PayFreight is an automated B2B freight settlement engine built on Solana. It bridges real-world transport operations with Web3 infrastructure by linking cryptographic e-CMR verification with automated escrow smart contracts for instant, low-cost settlement.

2. Product & Technology

- **Automated Escrow Engine:** Smart contract escrow locks freight funds upon order confirmation and automatically releases payouts upon verified delivery.
- **e-CMR Verification:** SHA-256 hash checks and cryptographic validation of electronic consignment notes (e-CMR) trigger instantaneous payouts without manual document auditing.
- **Multi-Chain Architecture:** Native Solana integration for high-throughput, low-latency transaction processing, built alongside proven Polygon wallet architecture testing.
- **B2B Web Dashboard & MVP:** A working prototype enabling shippers, carriers, and dispatchers to manage settlement status intuitively without requiring complex blockchain technical knowledge.

3. Market Opportunity

- **Target Industry:** European Road Freight Transport ($400B+ TAM).
- **Target Audience:** Independent freight carriers, mid-sized freight forwarding agencies, e-CMR software providers, and digital freight marketplaces.
- **Business Model:**
- **Pay-per-use micro-transaction model:** Percentage or fixed fee per settled transaction.
- **Pre-sale transaction settlement bundles:** Designed for early-adopter carriers and forwarders.

4. Competitive Advantage

- **Instant Settlement vs. Factoring:** Eliminates 60-day payment cycles at a fraction of traditional factoring costs.
- **Cryptographic Trust:** Automated e-CMR verification removes manual document auditing delays and payment disputes.
- **Logistics-First Architecture:** Built directly for real-world freight operations by industry veterans, rather than theoretical financial speculation.
- **Direct Market Access:** Instant outreach channel to 7,000+ European carrier and forwarder subscriber contacts via established freight exchange B2B network.

5. Team & Execution

> **Dejan Luzar — Founder & CEO**
>
> - 25+ years of hands-on experience in European international logistics, road freight forwarding, and digital marketplaces.
> - Founder and CEO of CargoTrans (cargotrans.net, operating since 2001).
> - 7 years of operational experience as CEO managing a 21-vehicle automotive transport fleet.
> - Deep domain expertise in carrier workflows, dispatcher operational pain points, and cross-border European freight dynamics.

6. Investment Case & Growth Roadmap

- **Strategic Growth Objectives:**
  - Complete full Solana Mainnet deployment and smart contract audits.
  - Deepen API integrations with leading European e-CMR software providers.
  - Conduct pilot testing across key European trade corridors and prepare expansion frameworks for North America and global logistics standards.
  - Ensure full regulatory alignment under EU MiCA compliance frameworks.
- **Use of Capital / Allocation:**

Share	Category / Focus Area
45%	Smart Contract Security, Audits & Tech Infrastructure
30%	e-CMR Partner Integration & B2B Pilot Deployments
15%	Legal, MiCA Compliance & Corporate Structuring
10%	Operational Growth & Ecosystem Expansion
